

804. Unique Morse Code Words

```

1 class Solution:
2     def uniqueMorseRepresentations(self, words: List[str]) -> int:
3         map = [".-","-...",".-.-.","-..",".--","..--","...--","....-","....."]
4         res = set()
5         for word in words:
6             val = ""
7             for s in word:
8                 val += map[ord(s) - ord('a')]
9             res.add(val)
10        return len(res)

```
